

ALL NEW ACCURATE PLATINUM

TWINSPIN 12

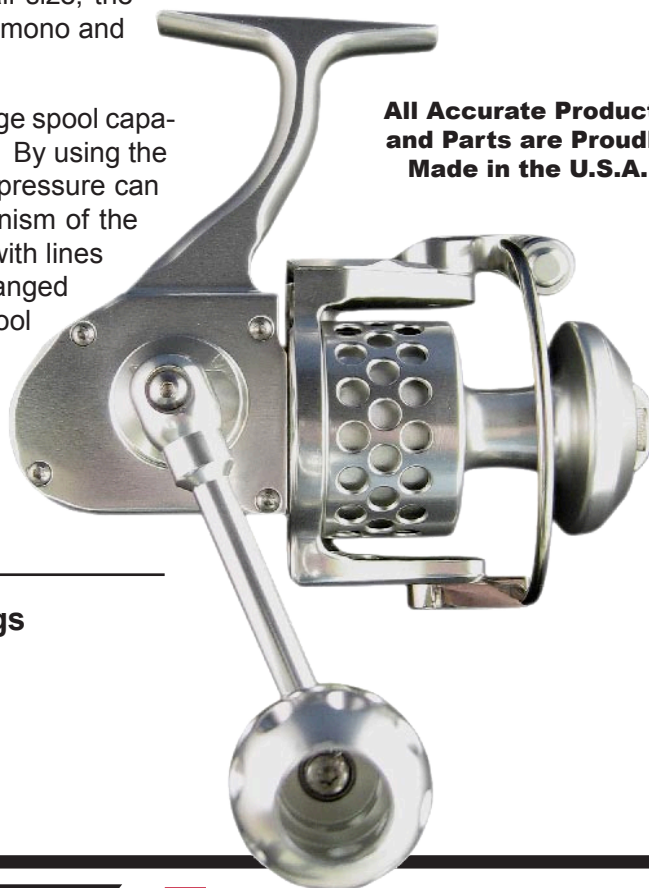

Leave It To Accurate Fishing Products - Inventors of the world's first patented, revolutionary, true twin-drag gamefishing reel that applies even drag pressure on both sides of the spool - to put another spin on things.

In 2006 Accurate successfully launched the TwinSpin™ 30 the world's first true dual-drag, ocean spinning reel. Now, enter the 2007 **TwinSpin™ 12** - the sportfishing world's **smallest**, true dual-drag, ocean spinning reel with a braking system applying equal braking pressure to both sides of the reel spool. Not your average, limited-duty spinning model, the new **TwinSpin™ 12** is designed for heavy-duty angling performance, far surpassing the capabilities of traditional spinning reels. "You can forget all you've learned or been told about spinning reels before," says Jack Nilsen, who, with his sons David and Douglas, are co-owners of Accurate Fishing Products. "You don't have to baby this reel. It's designed and built to take it - and give it back tenfold - to some really big fish you wouldn't have thought to challenge with spin gear in the past."

Meeting the finest quality standards of all gamefishing reels, the new **TwinSpin™ 12**'s body, rotor, and spool are precision-machined from solid block of 6061 T-6 aircraft-grade aluminum. Complementing the reel's leading-edge design, is a spool shaft and two drag plates made from titanium. Internally the **TwinSpin™ 12**'s performance is maximized by 14 aircraft-grade, ABEC 5 bearings; plus stainless-steel gears, and a AccuDrag system using heat-dissipating, titanium drag-friction washers. Even with its small size, the **TwinSpin™ 12** has a line capacity of 350 yards of 12 pound mono and 300 yards of 50 pound spectra braided line.

Externally, the new **TwinSpin™ 12** offers a quick-hange spool capability with a drag preset knob located on the top of the spool. By using the drag-registration lines found encircling the spool top, drag pressure can be precisely adjusted. Since the patented TwinDrag™ mechanism of the **TwinSpin™ 12** is retained within the spool, optional spools with lines varying in breaking strengths can quickly and easily be changed without having to readjust the drag settings with each spool change. Line disengagement and pickup is via a rugged, spring bail mechanism. An ergonomically-designed power knob naturally conforms to the shape of the angler's hand, making a comfortable, constant grip.

**All Accurate Products
and Parts are Proudly
Made in the U.S.A.**

TWINSPIN™ 12 FEATURES

- Quick Change Spool - Holds Drag Settings
- Automatic Spring Bail Return
- Preset Registration Lines for Accuracy
- Titanium Drag Washers and Spool Shaft
- 14 ABEC 5 Bearings
